

## **P2D1- Daniel Herrera**

- The need for more research, development, and utilization of solar and wind energy sources due to our decreasing and finite amount of fossil-fuel reserves.
- My medium is the documentary entitled, *FUEL*. The movie discusses the limited amount of nonrenewable fossil fuel resources that remain and the problems associated with our continued dependence on them. Another topic of discussion is the other forms of cleaner and renewable energy that exist.
- Guiding Questions:
  - Is this a good topic?
  - How technical should the material in the paper be?
  - Do you think this is an interesting topic?
  - What could be changed?
- I have discovered a wide variety of real-world applications using different forms of alternative energy (fully electric production vehicles), government involvement in the quest for a reliable alternative energy source, and the current efficiency of these new methods.
